

QUANTITATIVE MODEL

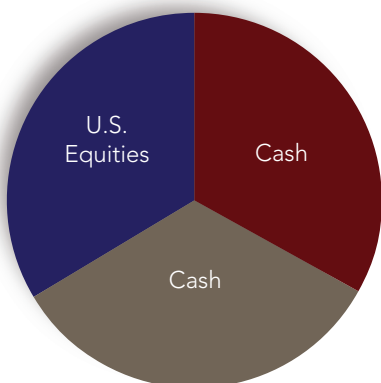

Potential Allocation A

Potential Allocation B

Potential Allocation C

The above Potential Allocations represent three possible allocations for this strategy. Note that additional allocations are possible that are not depicted herein.

ABOUT THE FREEDOM ALTERNATIVE[®] ELEMENT

Capitalizing on non-traditional asset classes and investment strategies

The Freedom Alternative[®] Element of Freedom Capital Management Strategies[®] delivers the final piece of diversification to each client's unique investment portfolio. This Element provides investors access to a range of historically uncorrelated or non-traditional asset classes and investment strategies. Freedom Alternative[®] seeks to enhance the risk/return profile of each investor's overall portfolio and to improve the consistency of performance over a full market cycle.

INVESTMENT OBJECTIVE

Investors choosing the Alternative Quantitative Model seek a portfolio managed through a quantitative investment process that selects portfolio holdings in a nontraditional manner.

ABOUT ALTERNATIVE QUANTITATIVE

The Quantitative Model is a non-traditional investment strategy managed through a quantitative investment process. The portfolio is flexibly managed and responds to the changing supply and demand relationships of the major investment asset classes based on technical indicators. The Quantitative Model is constructed with three components. The first two components utilize a dynamic asset level investing methodology based on relative strength to identify the two strongest asset classes among the following: domestic equities, international equities, commodities, foreign currencies, fixed income, and cash. The third component of the portfolio provides constant exposure to domestic equities utilizing a sector rotation strategy following the same relative strength based methodology.

REASONS TO CONSIDER THIS MODEL

- You seek a strategy that actively repositions portfolio holdings in an attempt to reflect market leadership among key asset classes and at times may demonstrate low correlation to global equity markets.
- You prefer a portfolio managed solely through a quantitative investment process.
- You seek a portfolio that can invest up to 100% in equities but has the ability to reduce equity exposure to 33%.
- You desire an investment strategy with the ability to invest in any of the major asset classes (stocks, bonds, currencies, commodities, or cash).
- You prefer a strategy that invests solely through exchange traded funds (ETFs).

FACTS:

Manager	Team Managed
Portfolio Holdings	Exchange Traded Funds (ETFs)
Model Minimum	\$500
